

A mid to late season florricane raspberry suited to long-cane production. Exceptionally **high yielding** and **economical** to produce.

Plant |

Spine free canes turn mid-brown in maturity. High root and cane vigour produces a high number of canes which display fruit well on strong laterals.

Resistance |

Gene A10 confers resistance to most biotypes of raspberry aphid *Amphorophora idaei*.

Fruit |

Mean Berry Size: 6.2g
Mean Brix° Level: 10.8°
Pale pink-red colour, shape is round to conic.
Outstanding shelf-life. Maintains uniformity in storage and transports very well.
Detaches easily from plug and quickly fills a punnet. Sweet and fruity with a creamy texture and vanilla notes.

Requirements and results may differ according to location and production systems. Growing recommendations based on trials at James Hutton Institute, Dundee.

James Hutton Limited is the commercial subsidiary of the James Hutton Institute, Scotland.
